Work Experience

Backend Developer Intern Jul 2025 - Sep 2025
Common Criteria Pakistan | Islamabad, Pakistan (On-Site)

- Designed and deployed 5+ Laravel backend modules, optimizing complex SQL querying and logic to improve overall system response time by ~20%.
- Co-developed an internal HRMS and Document Management System (DMS), engineering a recursive directory upload feature that enables direct folder ingestion (bypassing standard RAR compression), reducing manual file handling by 40%.
- Collaborated in a shared codebase using Git, conducting peer code reviews and enforcing version control standards to decrease post-deployment bugs by 15%.

Projects

VisionIndex Video Analytics Platform (Final Year Project) Nov 2025 - Apr 2026

Developed an AI-powered video analytics platform for detecting, tracking, and indexing people and objects in surveillance footage. Implemented YOLO-based detection, multi-object tracking, CLIP embeddings, and vector search using Qdrant for multimodal text and image retrieval. Built scalable backend and AI inference services using Python, FastAPI, PostgreSQL, MongoDB, and Temporal for asynchronous workflow orchestration. Deployed using Docker on AWS EC2 with AWS S3 for storage. The project was awarded PKR 30,000 in funding by the Office of Research, Innovation and Commercialization (ORIC) in recognition of its potential and innovation.

Action Recognition System Mar 2025 - May 2025

Developed a deep learning human action classification system using PyTorch on the Stanford-40 dataset. Built a hybrid ResNet50-LSTM architecture by leveraging transfer learning with a frozen ImageNet-pretrained ResNet50 backbone for feature extraction and an LSTM-based classifier across 40 action classes. Implemented data preprocessing, data augmentation, model training, validation, and TorchScript model export, achieving 92.2% validation accuracy. Built a FastAPI inference API for serving model predictions.

Agentic RAG Knowledge Assistant July 2026 - Aug 2026

Developed an agentic Retrieval-Augmented Generation (RAG) system that enables LLMs to retrieve and reason over domain-specific documents before generating grounded responses. Implemented document loading, text chunking, embedding generation, vector similarity search, and context retrieval using LangChain, HuggingFace embeddings, and FAISS. Integrated tool-based agent workflows that dynamically retrieve relevant information based on user queries and provide context-aware responses.

Core Skills

Programming: Python, JavaScript, SQL, C++
AI Systems & LLMs: OpenAI, Google Gemini, LangChain, AI Agents, n8n, Retrieval-Augmented Generation (RAG), Qdrant, FAISS, Vector Search, Semantic Search, Embedding Pipelines, ETL Pipelines, Temporal
AI/ML: PyTorch, OpenCV, Scikit-Learn, YOLO, Transfer Learning, CNNs, LSTMs, Computer Vision, Deep Learning, Machine Learning, CLIP, TorchScript, NumPy, Pandas, Feature Engineering, Data Preprocessing, Model Training, Model Evaluation
Backend Engineering: FastAPI, Flask, Express.js, REST APIs, PostgreSQL, MongoDB, Laravel, Node.js
Cloud & DevOps: AWS EC2, AWS S3, Docker, Linux, Git, REST API Deployment, Containerization, Basic DevOps Practices, Postman
Core Concepts: OOP, Data Structures, Algorithms, Design Patterns, Problem Solving

Education

Air University 2022 - 2026
Bachelor Computer Science
GPA: 3.15 / 4.00

Certificates

Generative AI Application Developer (NCEAC)	Mar 2026
Supervised Machine Learning (DeepLearning.AI via Coursera)	Nov 2025
